FOR IMMEDIATE RELEASE

City of Priest River Announces Funding Win for City Park Playground Phase II

PRIEST RIVER, Idaho — The City of Priest River is thrilled to announce that it has officially been awarded a **$139,256 Idaho Community Development Block Grant (CDBG)** to complete Phase II of the City Park Playground Improvement Project.

Administered by the Idaho Department of Commerce, this federal grant completely funds the upcoming expansion of our community's favorite gathering space.

Building directly on Phase I—which successfully brought a 50-foot double-track zip line, swing sets, an obstacle course, and a toddler structure to the park—Phase II focuses on delivering a large, central, inclusive play structure.

Key Features of the Phase II Expansion:

- **Main Play Structure:** A massive, fully integrated system featuring an 8-foot climbing wall, multiple slides, and diverse climbing components.
- **Sun Canopy Shades:** Overarching shade structures designed to protect playing children from heat and UV rays.
- **Seamless Connection:** The new additions will connect directly to the existing Phase I obstacle course, creating a unified, multi-age playground experience.
- **Professional Installation:** The grant fully covers professional installation and formal grant administration.

What's Next?

With funding secured, the city is preparing to move forward with planning and professional construction. Smaller, auxiliary pieces of playground equipment will be added down the line using local funds and ongoing community match efforts.

The city extends its deepest gratitude to every resident and business who has contributed to the multi-year park plan so far. For further project updates, design renderings, or details on how to get involved, please visit the official City of Priest River Website.
